

# S-5!®

The Right Way!

The right way to attach almost anything to metal roofs!

## Installation Instructions

**S-5!® Warning!** Please use these products responsibly! Visit our website or contact your S-5! distributor for available load test results. The user and/or installer of these parts is responsible for all necessary engineering and design to ensure the S-5-N and S-5-N 1.5 have been properly spaced and configured.

**Notice to S-5! users:** Due to the many variables involved with specific panel products, climates, snow melt phenomena, and job particulars, the manufacturer cannot and does not express any opinions as to the suitability of any S-5! assembly for any specific application and assumes no liability with respect thereto. S-5! products are tested for ultimate holding strength on various profile types and materials. This information is available from the S-5! website: [www.S-5.com](http://www.S-5.com). This document is an installation guide only and the photographs and drawings herein are for the purpose of illustrating installation, tools and techniques, not system designs. Information contained within is intended to apply to the document as a whole.

**IMPORTANT:** The S-5-N, S-5-N Mini, S-5-N 1.5, and S-5-N 1.5 Mini are designed to fit numerous (but dimensionally specific) 1" - 1.5" nail strip profiles; however these profile types are vast with new variations coming into the market regularly. These clamps may not be suitable for every such profile. To avoid potential damage to roof seam it is important to verify clamp-to-roof suitability. Consult the load table for suitability at the S-5! website: [www.S-5.com](http://www.S-5.com).

## Tools Needed

- Screw Gun
- T30 Torx Bit Tip (provided)
- Dial-Calibrated Torque Wrench  
(For accurate tension values, do NOT use a clicking torque wrench)

## To Install S-5-N and S-5-N 1.5

1. Partially thread the setscrews into the clamp by hand.
2. Position clamp at desired location along the seam.
3. Make sure the toe of the clamp engages the female part of the seam as shown.
4. Tighten the setscrews using a screw gun\* and the included screw gun bit tip. Setscrews should be tensioned and re-tensioned as the seam material compresses, i.e. tighten the first setscrew, then the second; then repeat until each setscrew achieves the recommended torque.

The setscrews will dimple the seam material but will not penetrate it. When relying on published load values, setscrew tension should be verified periodically using a calibrated torque wrench as indicated below to ensure the tool is consistently achieving the proper torque range.

\* For time-saving tool recommendations, call S-5!

**Note:** Seams that exceed maximum allowance (see illustrations to right) at the widest part of the seam will require hand crimping to allow the clamp to fit.

Specified Torque	Inch Pounds	Foot Pounds	Nm
22ga steel	160–180	13–15	18–20
24ga steel and all other metals	130–150	11–12.5	15–17

Once installed correctly, these clamps require no maintenance or re-inspection for the life of the roof.

For critical attachment applications, tighten the included M8-1.25 x 16 mm hex flange bolt to 160 inch pounds (13 foot pounds).

These instructions are for use by those experienced in the trade. Always follow appropriate safety precautions and use appropriate tools.

Above illustrations show S-5-N clamp.

S-5-N 1.5 & S-5-N 1.5 Mini

## S-5-N Mini, and S-5-N 1.5 Mini Installation Instructions

### To Install S-5-N Mini and S-5-N 1.5 Mini

1. Partially thread the setscrew into the clamp by hand.
2. Position clamp at desired location along the seam.
3. Make sure the toe of the clamp engages the female part of the seam as shown.
4. Tighten the setscrew using a screw gun\* and the included screw gun bit tip. The setscrew will dimple the seam material but will not penetrate it. When relying on published load values, setscrew tension should be verified periodically using a calibrated torque wrench as indicated below to ensure the tool is consistently achieving the proper torque range.

**Note:** Seams that exceed maximum allowance (see illustrations on front page) at the widest part of the seam will require hand crimping to allow the clamp to fit.

\* For time-saving tool recommendations, call S-5!

Specified Torque	Inch Pounds	Foot Pounds	Nm
<b>22ga steel</b>	160–180	13–15	18–20
<b>24ga steel and all other metals</b>	130–150	11–12.5	15–17

Once installed correctly, these clamps require no maintenance or re-inspection for the life of the roof.

For critical attachment applications, tighten the M8-1.25 x 16 mm hex flange bolt (sold separately) to 160 inch pounds (13 foot pounds).

**NOTE:** Any S-5! warranty and/or calculation may be void if hardware is used that was not furnished by S-5! directly or through one of their licensed distributors

Above illustrations show S-5-N Mini clamp.

#### S-5!® Warning! Please use this product responsibly!

Products are protected by multiple U.S. and foreign patents. Visit the website at [www.S-5.com](http://www.S-5.com) for complete information on patents and trademarks. For maximum holding strength, setscrews should be tensioned and re-tensioned as the seam material compresses, i.e. tighten the first setscrew, then the second; then repeat until each setscrew achieves the recommended torque. Clamp setscrew tension should be verified using a calibrated torque wrench between 160 and 180 inch pounds when used on 22ga steel, and between 130 and 150 inch pounds for all other metals and thinner gauges of steel. Consult the S-5! website at [www.S-5.com](http://www.S-5.com) for published data regarding holding strength.
